Education

University of Houston

Bachelor of Science in Computer Science

Houston, TX

December 2024

Bachelor of Business Administration in Finance

December 2024

Technical Skills

Languages: TypeScript, Python, C/C++, Rust, Java, SQL

Tools & Frameworks: React, Node.js, Redis, Jenkins, Karate, Docker, Postgres, AWS, Azure

Certifications: CompTIA Pentest+, Microsoft Certified: Azure Fundamentals, Certified SAE 6 Practitioner

Experience

Visa

Austin, TX

Software Engineer

June 2025 – Present

- Engineer on Visa's **3DS Directory Server**, a core authentication service processing **30M+ daily card-not-present transactions** across global markets
- Implemented **GADQ and NPA feature enablement** for recurring transactions, adding device validation, regional exclusion configuration, and in-app/browser support with Karate test coverage and Liquibase database scripts
- Designed and built an **LLM-powered regression analysis agent** using LangGraph and MCP servers, automating failure categorization and test case remediation across regression scenarios with a real-time streaming interface
- Built **CodeGrepper**, a full-stack TypeScript tool using Claude Agent SDK and custom MCP servers, enabling non-technical product owners to query codebases and Postgres/Redis configurations in natural language

Chevron

Houston, TX

Software Engineer Intern

May 2023 – August 2023

- Developed a web app to enable **5,000+ employees** to report incidents efficiently, increasing reporting accuracy by 23%
- Built an AI model on ServiceNow to automate tech support routing, **reducing resolution time by 30%**
- Designed a Cloud learning pathway that **cut employee onboarding time by 35%** across infrastructure teams

Seatgull

Houston, TX

Software Engineer Intern

February 2022 – October 2022

- Designed a course scheduler for **30+ universities**, used by **5,000+ students**, reducing planning time by **50%**
- Built a scalable asynchronous backend in Rust using Actix, resulting in a **37% increase in app response speed**

Projects

Unison - React.js, TypeScript, Node.js

- Raised pre-seed funding to develop an application for maintaining relationships naturally
- Joined the OwlSpark/RedLabs startup accelerator and connected with Y Combinator

Homelab Infrastructure - Docker, Tailscale, Cloudflare Tunnels, Nginx, WireGuard

- Architected a **multi-node homelab** connecting a Raspberry Pi gateway and OpenClaw node to an Oracle Cloud server via Tailscale mesh VPN for secure cross-network service orchestration
- Built a webhook service using **Cloudflare Tunnels** on the Raspberry Pi to bridge external events to internal tooling, with Docker-managed services and systemd lifecycle control

Pi-Dashboard - GTK, Rust, GraphQL Query, REST API

- Built a dashboard with the GTK Rust library to display **7+ server metrics**, including latency and CPU/RAM usage
- Implemented integrations with GraphQL queries and REST APIs, pulling data from my calendar and task manager
- Used optimal low-level asynchronous and multi-threaded programming to reduce RAM usage over a browser solution

Leadership

CougarCS

Houston, TX

President

December 2022 - December 2023

- Led a team of **16 officers** for the largest computer science organization at the University of Houston
- Partnered with over **10 companies** to provide employment opportunities for **1,000+ students each semester**
